Euromod Single/Double Gang Wallplates ❯

The Euromod system of wallplates provides a flexible and versatile method of installation. This modular system offers a wide range of wallplates and modules that allows the user to install as many or as few data or voice outlets as required. The system caters for small and large systems alike.

The Euromod Single and Double gang wallplate system is the basis of this modular approach. The single gang wallplate has a 50 x 50mm aperture and the double gang a 50 x 100mm aperture, which accepts two (single gang) or four (double gang) of the Euromod range of data, voice or blank modules (modules have a 25 x 50mm fascia size).

The polished face of these wallplates offers a quality finish, ideal for office installations and the styling complements most UK style electrical power outlets.
